د. علي الزاهمي

## Contents

## الكورس الأول :

Ch. 1 : Introduction in Cost Accounting

Ch. 2 : Static and Flexible Budget

Ch. 3 : Standard Costing and Variance Analysis

Ch. 4 : Accounting Procedures for Standard Costing

Ch. 5: Gross Profit Analysis

Appendix : Other Subjects - Standard Costs System in Process

Costing

## Chapter

1

## Concept of Cost Accounting :

Cost accounting is the process of determining and accumulating the cost of product or activity . It is a process of accounting for the measurement and the control of cost .
Cost accounting is the process of recording, classifying, analyzing, summarizing, and allocating costs associated with a process, product and activity for costs control. Cost accounting provides information about control current operations and plan for the future .
The functional activities are included in the scope of cost accounting can be explain as follows :

1. Cost Book Keeping : Cost accounting records of all costs incurred in departments, activities, products and services in the company during the period.
2. Cost System : Systems and procedures are devised for proper accounting for costs . A cost accounting system is a framework used by firms to estimate the cost of products .
3. Cost Ascertainment : Ascertaining cost of products, processes, jobs, services, etc., it becomes the basis of managerial decision making such as pricing, planning and control .
4. Cost Analysis : It involves the process of finding out the causal factors of actual costs varying from the budgeted costs and fixation of responsibility for cost increases .
5. Cost Control : It involves a detailed examination of each cost for analyzed to know whether the current level of costs is satisfactory in the light of standards set in advance .
6. Cost Reduction : It is the process used by companies to reduce their costs and increase their profits . Depending on a company's services or product, the strategies can vary .
7. Cost Reports : Presentation of cost is the ultimate function of cost accounting . Cost reports form the basis for planning and control, performance appraisal and managerial decision making.

## Objectives of Cost Accounting :

Cost accounting has the following main objectives, as follows :

1. Determining selling price .
2. Controlling cost .
3. Providing information for decision making .

This objectives can be explained as follows :

1. Determining Selling Price : The total product cost and cost per unit of product are important in deciding selling price of product in the company .
2. Controlling Cost : Cost accounting helps in controlling cost by using various techniques such as budgetary control, Standard costing, and inventory control .
3. Providing Information for Decision Making : Cost accounting provides information for decision making as follows :
a. Determination of cost volume profit relationship .
b. Make or buy a component .
c. Shut down or continue operation at a loss .
d. Continuing with the existing machinery or replacing them by improved and economical machines .

## Importance of Cost Accounting :

The importance of cost accounting are three points, as follows :

1. Importance to management .
2. Importance to employees .
3. Cost accounting and creditors .

This Importance can be explained as follows :

1. Importance to Management : Cost accounting provides invaluable help to management. It is difficult to indicate where the work of cost accountant ends and managerial control begins . The advantages are as follows :
a. Determining the Costs of Cost Objectivities .
b. Helps in Cost Reduction .
c. Elimination of Wastage .
d. Helps in Identifying Unprofitable Activities .
e. Helps in Fixing Selling Prices .
f. Helps in Inventory Control and Estimate .
2. Importance to Employees : employees have an interest in which they are employed. An efficient costing system benefits employees through incentives plan in their enterprise, etc..
3. Cost accounting and creditors : Suppliers, investor's financial institution and other moneylenders have a stake in the success of the business concern and efficient costing system .

## Difference between Cost Accounting and Financial Accounting :

The differences between cost accounting and financial accounting can be explain as follows :

Difference between Cost Accounting and Financial Accounting

| Basis | Cost accounting | Financial Accounting |
| :---: | :--- | :--- |
| Objective | It provides information about <br> the cost to control cost and for <br> decision making. | It provides information about the <br> financial performance and <br> financial position of the business . |
| Recording of <br> Data | It records and presents the <br> estimated / budgeted data. | It records historical data . |
| Users of <br> Information | The cost accounting is used by <br> internal management at <br> different levels . | The users of financial accounting <br> are shareholders, creditors and <br> government etc. . |
| Analysis of | It provides the details of cost <br> Costs \& Profit <br> and profit of each product . | It shows the profit/ loss of the <br> organization . |
| Time Period | Its reports and statements are <br> prepared when required . | Financial Statements are prepared <br> usually a year . |
| Presentation <br> of Information | There are not any set formats <br> for presenting cost information . <br> . set format is used for <br> presenting financial information . |  |
| Information <br> Characteristics | Current / forecasted, Quantitative <br> qualitative, Monetary / / <br> nonmonetary. | Historical, Quantitative, Monetary <br> and Verifiable . |

## General Principles of Cost Accounting :

Following are the main principles of cost accounting :

1. Cause-effect relationship .
2. Charge of cost only after its incurrence .
3. Past costs should not form part of future costs .
4. Exclusion of abnormal costs from cost accounts .
5. Principles of double entry should be followed preferably .

## Questions :

1. Define the following : Cost Accounting, Cost Book Keeping, Cost System, Cost Ascertainment , Cost Analysis , Cost Control , Cost Reduction, Cost Reports .
2. What are the objectives of cost accounting? .
3. Cost accounting provides information for decision making, explain?.
4. Explain the importance of cost accounting ? .
5. Explain the importance of cost account to management? .
6. Explain the importance of cost account to employees? .
7. Explain the importance of cost account to creditors? .
8. What are the difference between cost accounting and financial accounting? .
9. What are the main principles of cost accounting? .
10.Fill the following :
a. Cost accounting is the process of $\qquad$
$\qquad$
$\qquad$ and allocating costs associated with a process, product and activity for costs control .
b. Cost accounting provides information about and
c. A cost accounting system is a framework used by firms to estimate the
d. The total product cost and cost per unit of product are important in
e. Cost accounting helps in controlling cost by using various techniques such as and

## Chapter

2

## Static and Flexible Budget

## Examples (1) :

The following data concerned with Hanford Company during 2020 :

| Data | Actual Results | Static Budget |
| :---: | :---: | :---: |
| Sales Units | $\mathbf{8 0 0 0}$ Unit | 10000 Unit |
| Sales Price Per Unit | $\$ 12$ | $\$ 15$ |
| Cost Per Unit | $\$ 10$ | $\$ 14$ |
| Fixed Cost | $\$ 14000$ | $\$ 7000$ |

Required :

1. Prepare the income statement based on actual results, flexible budget and static budget .
2. Compute the total static budget variance .

## Solution :

1. Income statement based on actual results, flexible and static budget :

| Data | Actual Results | Flexible Budget | Static Budget |
| :---: | :---: | :---: | :---: |
| Sales Units | $\mathbf{8 0 0 0}$ Unit | $\mathbf{8 0 0 0}$ Unit | $\mathbf{1 0 0 0 0}$ Unit |
| Income Statement : | $(8000 \times 12)$ | $(8000 \times 15)$ | $(10000 \times 15)$ |
|  | $\mathbf{9 6 0 0 0}$ | $\mathbf{1 2 0 0 0 0}$ | $\mathbf{1 5 0 0 0 0}$ |
| Revenues | $(8000 \times 10)$ | $(8000 \times 14)$ | $(10000 \times 14)$ |
| - Variable Costs | $\mathbf{( 8 0 0 0 0 )}$ | $\mathbf{( 1 1 2 0 0 0 )}$ | $(\mathbf{1 4 0 0 0 0})$ |
| Contribution Margin | $\mathbf{1 6 0 0 0}$ | $\mathbf{8 0 0 0}$ | $\mathbf{1 0 0 0 0}$ |
| - Fixed Costs | $\mathbf{( 1 4 0 0 0 )}$ | $\mathbf{( 7 0 0 0 )}$ | $\mathbf{( 7 0 0 0 )}$ |
| = Operating Income | $\mathbf{2 0 0 0}$ | $\mathbf{1 0 0 0}$ | $\mathbf{3 0 0 0}$ |

2. Compute the total static budget variance :

Flexible Budget Variance $=2000-1000 \quad=+1000$ Fav.
Total Sales Volume Variance $=1000-3000 \quad=-2000$ Unfav.
Total Static Budget Variance $=(+1000)+(-2000)=-1000$ Unfav.

## Examples (2) :

The following data concerned with Gillman Company during 2020 :

| Data | Actual Results | Static Budget |
| :---: | :---: | :---: |
| Sales Units | 100000 Unit | $\mathbf{9 0 0 0 0}$ Unit |
| Sales Price Per Unit | $\$ 250$ | $\$ 400$ |
| Cost Per Unit | $\$ 200$ | $\$ 310$ |
| Fixed Cost | $\$ 4000000$ | $\$ 6000000$ |

Required :

1. Prepare the income statement based on actual results, flexible budget and static budget .
2. Compute the total static budget variance .

## Solution :

1. Income statement based on actual results, flexible and static budget :

| Data | Actual Results | Flexible Budget | Static Budget |
| :---: | :---: | :---: | :---: |
| Sales Units | $\mathbf{1 0 0 0 0 0}$ Unit | $\mathbf{1 0 0 0 0 0}$ Unit | $\mathbf{9 0 0 0 0}$ Unit |
| Income Statement : |  |  |  |
| Revenues | $(100000 \times 250)$ | $(100000 \times 400)$ | $(90000 \times 400)$ |
|  | $\mathbf{2 5 0 0 0 0 0 0}$ | $\mathbf{4 0 0 0 0 0 0 0}$ | 36000000 |
| - Variable Costs | $(100000 \times 200)$ | $(100000 \times 310)$ | $(90000 \times 310)$ |
| (20000000) | $\mathbf{( 3 1 0 0 0 0 0 0 )}$ | $(27900000)$ |  |
| Contribution Margin | $\mathbf{5 0 0 0 0 0 0}$ | $\mathbf{9 0 0 0 0 0 0}$ | $\mathbf{8 1 0 0 0 0 0}$ |
|  | $\mathbf{( 4 0 0 0 0 0 0 )}$ | $\mathbf{( 6 0 0 0 0 0 0 )}$ | $\mathbf{( 6 0 0 0 0 0 0 )}$ |
| - Fixed Costs | $\mathbf{\$ 1 0 0 0 0 0 0}$ | $\mathbf{\$ 3 0 0 0 0 0 0}$ | $\mathbf{\$ 2 1 0 0 0 0 0}$ |
| = Operating Income |  |  |  |

2. Compute the total static budget variance :
$\begin{array}{ll}\text { Flexible Budget Variance } & =1000000-3000000 \\ =-2000000 \text { Unfav. } \\ \text { Total Sales Volume Variance } & =3000000-2100000 \\ =+900000 \text { Fav. } \\ \text { Total Static Budget Variance } & =(-2000000)+(+900000) \\ =-1100000 \text { Unfav. }\end{array}$

## Example (3) :

The variable and fixed costs based on normal capacity level (500 DLH) for Scanlon Company during March 2020 as follows :

1. Variable Costs :

Indirect Materials \$150
Indirect Labor \$550
Equipment's Expenses \$350
Maintenance and Repairs \$175
Heating and lighting \$200
2. Fixed Costs :

Insurance \$600
Depreciation \$800
Rents $\$ 700$
Required :

1. Preparing a flexible budget within of the relevance range of capacity for five levels .
2. Calculate allocated rates for natural capacity .
3. Expressing a flexible budget in the form of an equation for normal capacity

## Solution :

1. Flexible budget within of the relevance range of capacity :

| Costs Elements | Cost Per Unit | Capacity Levels / Direct Labor Hours |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 300 | 400 | 500 | 600 | 700 |
| Variable Costs : |  |  |  |  |  |  |
| Indirect Materials | 0.3 | 90 | 120 | 150 | 180 | 210 |
| Indirect Labor | 1.1 | 330 | 440 | 550 | 660 | 770 |
| Equipment's Expenses | 0.7 | 210 | 280 | 350 | 420 | 490 |
| Maintenance and Repairs | 0.35 | 105 | 140 | 175 | 210 | 245 |
| Heating and lighting | 0.4 | 120 | 160 | 200 | 240 | 280 |
| Total | 2.85 | 855 | 1140 | 1425 | 1710 | 1995 |
| Fixed Costs : |  |  |  |  |  |  |
| Insurance |  | 600 | 600 | 600 | 600 | 600 |
| Depreciation |  | 800 | 800 | 800 | 800 | 800 |
| Rents |  | 700 | 700 | 700 | 700 | 700 |
| Total |  | 2100 | 2100 | 2100 | 2100 | 2100 |
| Total FOH. |  | 2955 | 3240 | 3525 | 3810 | 4095 |

2. Allocated rates for natural capacity :
Variable Allocated Rate $=\frac{\text { Cost }}{\text { Allocated Bases }}=\frac{\$ 1425}{500 \mathrm{DLH} .}=\$ 2.85 \mathrm{Hrs}$.
Fixed Allocated Rate $=\frac{\text { Cost }}{\text { Allocated Bases }}=\frac{\$ 2100}{500 \mathrm{DLH} .}=\$ 4.2 \mathrm{Hrs}$.
Total Allocated Rate $=\frac{\text { Cost }}{\text { Allocated Bases }}=\frac{\$ 3525}{500 \mathrm{DLH} .}=\$ 7.05 \mathrm{Hrs}$.
3. Expressing a flexible budget in the form of an equation for natural capacity :

$$
\begin{aligned}
\text { Total Cost } & =\text { Fixed Costs }+(\text { Production Volume } \times \text { Cost Per Unit }) \\
& =2100+(500 \times 2.85) \\
& =\$ 3525
\end{aligned}
$$

## Example (4) :

The relevance range between $100-300$ direct labor hours for Vulcan Company, the normal capacity level is 200 hours, The variable cost per unit and fixed costs for this department based on normal capacity level during September 2018 as follows :

## 1. Variable Cost Per Unit :

Indirect Labor \$2.5

Equipment's Expenses $\$ 1.5$
2. Fixed Costs :
Depreciation $\$ 225$

Rents $\$ 300$
Required:

1. Preparing a flexible budget within of the relevance range of capacity .
2. Calculate allocated rates for natural capacity .
3. Expressing a flexible budget in the form of an equation for normal capacity

## Solution :

1. Flexible budget within of the relevance range of capacity :

| Costs Elements | Cost Per | Capacity Levels / Direct Labor Hours |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Unit | $\mathbf{1 0 0}$ | $\mathbf{2 0 0}$ | $\mathbf{3 0 0}$ |
| Variable Costs : |  |  |  |  |
| Equipment's Expenses | 2.5 | $\mathbf{2 5 0}$ | 500 | 750 |
|  |  | 150 | 300 | 450 |
| Total | 4 | 400 | 800 | 1200 |
|  |  |  |  |  |
| Fixed Costs : |  | 225 | 225 | 225 |
| Depreciation |  | 300 | 300 | 300 |
| Rents |  | $\mathbf{5 2 5}$ | 525 | 525 |
| Total |  | $\mathbf{9 2 5}$ | $\mathbf{1 3 2 5}$ | $\mathbf{1 7 2 5}$ |
| Total FOH. |  |  |  |  |

2. Allocated rates for natural capacity :

| Variable Allocated Rate | = | \$800 $\div 200$ DLH. | = | \$4 Hrs. |
| :---: | :---: | :---: | :---: | :---: |
| Fixed Allocated Rate | = | \$525 $\div 200$ DLH. | = | \$2.625 Hrs. |
| Total Allocated Rate | = | \$1325 $\mathbf{~ 2 0 0 ~ D L H . ~}$ |  | \$6.625 Hrs. |

3. Expressing a flexible budget in the form of an equation for natural capacity :

$$
\begin{aligned}
\text { Total Cost } & =\text { Fixed Costs }+(\text { Production Volume } \times \text { Cost Per Unit }) \\
& =525+(4 \times 200) \\
& =\$ 1325
\end{aligned}
$$

## Exercises :

## Exercise (1) :

Pizza company operates a meal home-delivery service. It has agreements with 20 restaurants to pick up and deliver meals to customers who phone or fax orders to Pizza company. The company allocates variable and fixed overhead costs on the basis of delivery time. The company's owner, Allen Carter, obtains the following information for January 2018 overhead costs :

| Data | Actual Results | Static Budget |
| :---: | :---: | :---: |
| Sales Units | $\mathbf{1 6 0 0 0}$ Unit | $\mathbf{2 0 0 0 0}$ Unit |
| Sales Price Per Unit | $\$ 24$ | $\$ 30$ |
| Cost Per Unit | $\$ 20$ | $\$ 28$ |
| Fixed Cost | $\$ 28000$ | $\$ 14000$ |

Required :
Prepare the income statement based on actual results, flexible budget and static budget, and compute the total static budget variance .

## Exercise (2) :

Douglass company uses the static and flexible budget system. The following table shows the budgeted amounts and actual results related to overhead for December 2018 :

| Data | Actual Results | Static Budget |
| :---: | :---: | :---: |
| Sales Units | 200000 Unit | 180000 Unit |
| Sales Price Per Unit | $\$ 500$ | $\$ 800$ |
| Cost Per Unit | $\$ 400$ | $\$ 620$ |
| Fixed Cost | $\$ 8000000$ | $\$ 12000000$ |

Required :
Prepare the income statement based on actual results, flexible budget and static budget, and Compute the total static budget variance .

## Exercise (3) :

The following data concerned with Hanford Company during 2020 :

| 1. |  |
| :---: | :---: |
| Sctual Results |  |
| Sales Price Per Unit | $\mathbf{1 6 0 0 0}$ Unit |
| Cost Per Unit | $\$ 24$ |
|  | $\mathbf{\$ 2 0}$ |
|  | $\mathbf{F i x e d}$ Cost |

| 2. Static Budget |  |
| :---: | :---: |
| Sales Units | 20000 Unit |
| Sales Price Per Unit | $\$ 30$ |
| Cost Per Unit | $\$ 28$ |
| Fixed Cost | $\$ 14000$ |

Required :

1. Prepare the income statement based on actual results, flexible budget and static budget .
2. Compute the total static budget variance .

## Exercise (4) :

The following data relates to the manufacturing department of Karloff Company. The relevance range between 800-1200 direct labor hours, This department is based on the normal capacity rate of 1000 direct labor hours per month, The following costs of the manufacturing department under normal capacity during July 2018 :

1. Variable Costs :

Indirect Materials $\$ 800$
Indirect Labor $\$ 1100$
Equipment's Expenses $\$ 600$
Maintenance and Repairs \$1650
2. Fixed Costs :

Insurance $\$ 1200$
Depreciation $\$ 1600$
Rents $\$ 1400$
Required :

1. Preparing a flexible budget within of the relevance range of capacity .
2. Calculate allocated rates for natural capacity .
3. Expressing a flexible budget in the form of an equation for normal capacity

## Exercise (5) :

The following data relates to the elements of factory overhead based on planning hours for maintenance department in Doffed Company, the relevance range between 400 - 600 direct labor hours, the normal capacity level is 500 hours, The variable cost per unit and fixed costs for based on normal capacity level during April 2018 as follows :

1. Variable Cost Per Unit :

Indirect Labor $\$ 2.7$
Utility Expenses \$1.8
2. Fixed Costs :

Depreciation $\$ 450$
Rents $\$ 550$
Required :

1. Preparing a flexible budget within of the relevance range of capacity
2. Calculate allocated rates for natural capacity .
3. Expressing a flexible budget in the form of an equation for normal capacity .

## Chapter

## Standard Costing and Variance Analysis

## Example (1) :

Dowlas Company uses standard cost system . The following data concerned with its product during Jun 2018 :

Number of production unit 400 unit .
Actual price for direct material \$25.
Actual quantity for direct material used in production 2000 kg . .
Standard price for direct material \$23.
Standard quantity per unit 4 kg . .
Standard quantity for total 1600 kg . ( 400 unit * 4 kg .)
Required :
Compute the price and quantity variances for direct materials .

## Solution :

Total Variance of $\mathrm{DM}=(\mathrm{AQ} \times \mathrm{AP})-(\mathrm{SQ} \times \mathrm{SP})$
$=(2000 \times 25)-(1600 \times 23)$
$=50000-36800=+13200$ Unfav.

1. Price Variance $\quad=(\mathrm{AP}-\mathrm{SP}) \times \mathrm{AQ}$

$$
=(25-23) \times 2000
$$

$$
=2 \times 2000 \quad=+4000 \text { Unfav } .
$$

2. Quantity Variance $=(\mathrm{AQ}-\mathrm{SQ}) \times \mathrm{SP}$

$$
\begin{aligned}
& =(2000-1600) \times 23 \\
& =400 \times 23
\end{aligned}
$$

## Example (2) :

Poly Containers makes plastic water tanks for a variety of commercial uses. The standard per unit of material are as follows :

| Data | Standard Quality | Standard Price |
| :---: | :---: | :---: |
| Material (A) | 3 Pounds | \$4 Per Pound |
| Material (B) | 5 Pounds | \$2 Per Pound |
| Material (C) | 2 Pounds | $\$ 3$ Per Pound |

During May 2018, the company produced 600 tanks and 400 tanks work in process ( $50 \%$ completed) . Actual data for May 2018 are as follows :

1. Material (A) purchased and used 3200 pounds @ $\$ 5$ per pound .
2. Material (B) purchased and used 3800 pounds @ $\$ 3$ per pound .
3. Material (C) purchased and used 1500 pounds @ $\$ 2$ per pound . Required :
Compute the price and quantity variances for direct materials.

## Solution :

Production Volume During Period $=600+(400 \times 50 \%)=800$ tanks

| Total Variance of DM | $=(\mathrm{AQ} \times \mathrm{AP})-(\mathrm{SQ} \times \mathrm{SP})$ |  |
| :---: | :---: | :---: |
| Material (A) | $=(3200 \times 5)-(800 \times 3 \times 4)$ | $=\$ 6400$ Unfav. |
| Material (B) | $=(3800 \times 3)-(800 \times 5 \times 2)$ | = \$3400 Unfav. |
| Material (C) | $=(1500 \times 2)-(800 \times 2 \times 3)$ | $=\$ 1800$ Fav. |
|  |  | \$8000 Unfav. |
| 1. Price Variance | $=(\mathrm{AP}-\mathrm{SP}) \times \mathrm{AQ}$ |  |
| Material (A) | $=(5-4) \times 3200$ | = \$3200 Unfav. |
| Material (B) | $=(3-2) \times 3800$ | \$3800 Unfav. |
| Material (C) | $=(2-3) \times 1500$ | $=\$ 1500$ Fav. |
|  |  | \$5500 Unfav. |
| 2. Quantity Variance | $=(\mathrm{AQ}-\mathrm{SQ}) \times \mathrm{SP}$ |  |
| Material (A) | $=(3200-2400) \times 4$ | $=\$ 3200$ Unfav. |
| Material (B) | $=(3800-4000) \times 2$ | \$400 Fav. |
| Material (C) | $=(1500-1600) \times 3$ | $=\$ 300 \mathrm{Fav}$. |
|  |  | \$2500 Unfav. |

## Example (3) :

Gloria Dee Inc. use job order costing system . The following data concerned with three completed job order during February 2018 :

1. Actual quantity and price for direct material used in production :

| Job Order | Actual Quantity | Actual Price |
| :---: | :---: | :---: |
| Job Order No. (10) | $\mathbf{2 5 0 0}$ Unit | $\$ 5$ |
| Job Order No. (11) | $\mathbf{5 5 0 0}$ Unit | $\$ 4$ |
| Job Order No. (12) | $\mathbf{5 0 0 0}$ Unit | $\$ 7$ |

2. Standard quantity and price of direct material for completed job order :

Job Order
Job Order No. (10)
Job Order No. (11)
Job Order No. (12)

Standard Quantity
2700 Unit
5000 Unit
4000 Unit

Required :
Compute the price and quantity variances for direct materials .

## Solution :

| Total Variance of DM : | $=(\mathrm{AQ} \times \mathrm{AP})-(\mathrm{SQ} \times \mathrm{SP})$ |  |  |
| ---: | :--- | ---: | :--- |
| Job Order No. (10) | $=(2500 \times 5)-(2700 \times 5)$ | $=\$ 1000 \mathrm{Fav}$. |  |
| Job Order No. (11) | $=(5500 \times 4)-(5000 \times 5)$ | $=\$ 3000 \mathrm{Fav}$. |  |
| Job Order No. (12) | $=(5000 \times 7)-(4000 \times 6)$ | $=\underline{\$ 11000 \mathrm{Unfav} .}$ |  |
|  |  | $\underline{\$ 7000 \mathrm{Unfav} .}$ |  |
| 1. $\quad$ Price Variance : | $=(\mathrm{AP}-\mathrm{SP}) \times \mathrm{AQ}$ |  | $=$ Zero |
| Job Order No. (10) | $=(5-5) \times 2500$ |  | $=\$ 5500 \mathrm{Fav}$. |
| Job Order No. (11) | $=(5-4) \times 5500$ |  | $\underline{\$ 5000 \mathrm{Unfav} .}$ |
| Job Order No. (12) | $=(6-7) \times 5000$ |  | $=\$ 1000 \mathrm{Fav}$. |
| 2. $\quad$ Quantity Variance : | $=(\mathrm{AQ}-\mathrm{SQ}) \times \mathrm{SP}$ | $=\$ 2500 \mathrm{Unfav}$. |  |
| Job Order No. $(10)$ | $=(2500-2700) \times 5$ |  | $=\underline{\$ 6000 \mathrm{Unfav} .}$ |
| Job Order No. (11) | $=(5500-5000) \times 5$ |  | $=(5000-4000) \times 6$ |

## Example (4) :

Genuine Nut Company produces 100-ounce cans of mixed pecans and cashews. Standard and actual information follows :

## Standard quantities and prices :

Material (X) : 40 ounces at $\$ 0.75$ per pound
Material (Y) : 10 ounces at $\$ 0.50$ per pound
Material ( Z ) : $\mathbf{5 0}$ ounces at $\$ 0.20$ per pound
Actual quantities and prices :
Material (X) : $\mathbf{1 4 0 0}$ pounds at $\$ 0.8$ per pound
Material (Y) : $\mathbf{4 0 0}$ pounds at $\$ 0.52$ per pound
Material ( Z ) : $\mathbf{3 2 0 0}$ pounds at $\mathbf{\$ 0 . 2 1}$ per pound
After process of mix and production treatments the company obtained one unit its standard weight 90 kg ., the completed production during April 2018 was 48 unit .

Required :
Compute the price, quantity, mix and yield variances for direct materials .

## Solution :

| Total Variance of DMMaterial (X) | $=(\mathrm{AQ} \times \mathrm{AP})-(\mathrm{SQ} \times \mathrm{SP})$ |  |  |
| :---: | :---: | :---: | :---: |
|  | $=(1400 \times 0.8)$ | $(48 \times 40 \times 0.75)$ | $=\$ 320$ Fav. |
| Material (Y) | $=(400 \times 0.52)-(48 \times 10 \times 0.5)$ |  | = \$32 Fav. |
| Material (Z) | $=(3200 \times 0.21)-(48 \times 50 \times 0.2)$ |  | \$192 Unfav |
|  |  |  | \$160 Fav. |
| 1. Price Variance | $=(\mathrm{AP}-\mathrm{SP}) \times \mathrm{AQ}$ |  |  |
| Material (X) | $=(0.8-0.75)$ | 1400 | $=\$ 70$ Unfav. |
| Material (Y) | $=(0.52-0.5)$ |  | = \$8 Unfav. |
| Material (Z) | $=(0.21-0.2)$ | 3200 | $=\$ 32$ Unfav. |
|  |  |  | \$110 Unfav |
| 2. Quantity Variance | $=(A Q-S Q) \times$ SP |  |  |
| Material (X) | $=(1400-1920) \times 0.75$ |  | $=\$ 390$ Fav. |
| Material (Y) | $=(400-480) \times 0.5$ |  | $=\$ 40 \mathrm{Fav}$. |
| Material (Z) | $=(3200-2400) \times 0.2$ |  | = \$160 Unfav |
|  |  |  | \$270 Fav. |
| Material | Standard Quantity Per Unit | Standard Price | Standard Cost |
| X | 40 Ounces | \$0.75 | \$30 |
| Y | 10 Ounces | \$0.5 | \$5 |
| Z | 50 Ounces | \$0.2 | \$10 |
| Total | 100 Ounces |  | $\underline{\underline{\$ 45}}$ |

Weight Average Standard Cost of Input Material $=\frac{45}{100}=\$ 0.45$
Weight Average Standard Cost of Output Material $=\frac{45}{90}=\$ 0.5$

Analysis of Quantity Variance :

1. Materials Mix Variance :
$[(\mathbf{1 4 0 0} \times \mathbf{0 . 7 5})+(\mathbf{4 0 0} \times \mathbf{0 . 5})+(\mathbf{3 2 0 0} \times 0.2)]-[(1400+400+$
$3200) \times 0.45$ ]
$=1890-2250 \quad=\$ 360$ Fav.
2. Materials Yield Variance :
$[(1400+400+3200) \times 0.45]-[(48 \times 90) \times 0.5]$
$=2250-2160 \quad=\$ 90$ Unfav.
\$270 Unfav.

Analysis of Mix and Yield Variance :

1. Materials Mix Variance to each Material :

Material (X) $=[5000 \times(1400 / 5000) \times 0.75]-[5000 \times 40 / 140 \times 0.75]=\$ 450$ Fav.
$\operatorname{Material}(Y)=[5000 \times(400 / 5000) \times 0.5]-[5000 \times 10 / 140 \times 0.5]=\$ 50$ Fav.
Material (Z) $=[5000 \times(\mathbf{3 2 0 0} / 5000) \times 0.2]-[5000 \times 50 / 140 \times 0.2]=\underline{\$ 140 \text { Unfav. }}$
\$360 Fav.
2. Materials Yield Variance to each Material :

```
Material (X) = [5000 < 40/140 < 0.75]-[48 \times 40 < 0.75] = $60 Unfav.
Material (Y) = [5000 \times 10/140 \times 0.5]-[48\times10\times0.5] =$10 Unfav.
Material (Z) = [5000 }\times5050/140\times0.2]-[48\times50\times0.2] = $20 Unfav. 
```

\$90 Unfav.

## Example (5) :

Eagle Company uses standard cost system . The following data concerned with its product during November 2020 :

Number of production unit $\mathbf{8 0 0}$ unit .
Actual rate for direct labor $\mathbf{\$ 5 0}$.
Actual hours for direct labor used in production 4000 hrs. .
Standard rate for direct labor \$46.
Standard hours per unit 8 hrs. .
Standard hours for total 6400 hrs. (800 unit *8 hrs.)
Required :
Compute the rate and efficiency variances for direct labor .

## Solution :

Total Variance of DL $\quad=(\mathrm{AH} \times \mathrm{AR})-(\mathrm{SH} \times \mathrm{SR})$

$$
=(4000 \times 50)-(6400 \times 46)
$$

$$
=200000-294400 \quad=-94400 \text { Fav. }
$$

1. Rate Variance

$$
\begin{aligned}
& =(\mathrm{AR}-\mathrm{SR}) \times \mathrm{AH} \\
& =(50-46) \times 4000 \\
& =4 \times 4000 \quad=+16000 \text { Unfav. }
\end{aligned}
$$

2. Efficiency Variance $=(\mathrm{AH}-\mathrm{SH}) \times \mathrm{SR}$

$$
=(4000-6400) \times 46
$$

$$
=-2400 \times 46 \quad=-110400 \text { Fav }
$$

## Example (6) :

Dolan Inc. uses standard cost system. The following data concerned with its direct labor during Jun 2018 :

1. Actual data :

Completed unit 80 unit .
Work in process 40 unit ( $\mathbf{5 0 \%}$ completed) .
Actual work hours :
Work category (1):480 hour @ \$50 per hour .
Work category (2): 300 hour @ $\$ 30$ per hour .
Work category (3): 250 hour @ $\$ 15$ per hour .
2. Standard data:

Work category (1) : 5 hour per unit © $\$ 45$ per hour .
Work category (2) : 3 hour per unit @ $\$ 35$ per hour .
Work category (3) : 2 hour per unit @ $\$ 15$ per hour .
Required :
Compute the rate and efficiency variances for direct labor .

## Solution :

$$
\begin{aligned}
\text { Production Volume During Period } & =80+(40 \times 50 \%) \\
& =80+20 \\
& =100 \text { Unit }
\end{aligned}
$$

Total Variance of DL $\quad=(\mathrm{AH} \times \mathrm{AR})-(\mathrm{SH} \times \mathrm{SR})$
Work category $(1)=(480 \times 50)-(100 \times 5 \times 45)=\$ 1500$ Unfav.
Work category (2) $=(300 \times 30)-(100 \times 3 \times 35)=\$ 1500$ Fav.
Work category (3) $=(250 \times 15)-(100 \times 2 \times 15)=\$ 750$ Unfav. $\$ 750$ Unfav.

1. Rate Variance $=(\mathrm{AR}-\mathrm{SR}) \times \mathrm{AH}$

Work category $(1)=(50-45) \times 480=\$ 2400$ Unfav.
Work category $(2)=(30-35) \times 300 \quad=\$ 1500$ Fav.
Work category $(3)=(15-15) \times 250 \quad=\underline{\text { Zero }}$
$\$ 900$ Unfav.
2. Efficiency Variance: $=(\mathrm{AH}-\mathrm{SH}) \times \mathrm{SR}$

Work category $(1)=(480-500) \times 45$
$=\$ 900$ Fav.
Work category $(2)=(300-300) \times 35 \quad=$ Zero
Work category $(3)=(250-200) \times 15=\$ 750$ Unfav. $\$ 150$ Fav.

## Example (7) :

Lisa Sampan Ltd. produces bags. It uses the standard cost system . The following data concerned with production November 2018 :

1. Normal capacity hours 4000 direct labor hour .
2. Actual production volume 1000 unit .
3. Monthly factory overhead in normal capacity level \$8000 (\$4800 variable factory overhead, $\$ 3200$ fixed factory overhead) .
4. Actual factory overhead $\$ 7384$.
5. Actual hour used in production 3475 hour .
6. Standard hour 3400 hour .

## Required:

Calculate and analysis the FOH variance by using two variance method, three variance method and four variance method .

## Solution :

Variable Allocated Rate $=4800 \div 4000=\$ 1.2$
Fixed Allocated Rate $=3200 \div 4000=\$ 0.8$
Total Allocated Rate \$2
Total Variance of $\mathrm{FOH}=7384-(2 \times 3400)$

$$
=7384-6800=\$ 584 \text { Unfav. }
$$

## Two Variance Method :

1. Controllable Variance $=7384-[3200+(1.2 \times 3400)]$

$$
=7384-7280 \quad=\$ 104 \text { Unfav } .
$$

2. Volume Variance $=7280-6800=\frac{\$ 480 \text { Unfav. }}{\underline{\$ 584 \text { Unfav. }}}$

Or:
Volume Variance $=(4000-3400) \times 0.8=\$ 480$ Unfav.

Three Variance Method :

1. Spending Variance $=7384-[3200+(1.2 \times 3475)]$

$$
=7384-7370 \quad=\$ 14 \text { Unfav. }
$$

2. Idle Capacity Variance $=7370-(3475 \times 2)$

$$
=7370-6950 \quad=\$ 420 \text { Unfav. }
$$

3. Efficiency Variance $=6950-6800=\frac{\$ 150 \text { Unfav. }}{\underline{\underline{584} \text { Unfav. }}}$

$$
\begin{aligned}
& \text { Or : } \\
& \text { Idle Capacity Variance }=(4000-3475) \times 0.8=\$ 420 \text { Unfav. } \\
& \text { Efficiency Variance }=(3475-3400) \times 2=\$ 150 \text { Unfav. }
\end{aligned}
$$

Four Variance Method :

1. Spending Variance $=7384-7370=\$ 14$ Unfav.
2. Idle Capacity Variance $=7370-6950 \quad=\$ 420$ Unfav.
3. Variable Efficiency $=(3475-3400) \times 1.2=\$ 90$ Unfav.

Variance
4. Fixed Efficiency $=(3475-3400) \times 0.8=\underline{\$ 60 \text { Unfav } .}$ Variance
$\$ 584$ Unfav.

## Example (8) :

Pony Containers makes plastic water tanks for a variety of commercial uses . The standard per unit material, labor and overhead costs are as follows :

Direct material : 20 pounds @ $\$ 0.9$
Direct labor : 4 hours @ \$6 per hour
Variable overhead : 4 hours @ $\$ 3.75$ per hour
Fixed overhead : 4 hours @ $\$ 1.25$ per hour
The overhead application rates were developed using a normal capacity of 2400 direct labor hour . Production is assumed to occur evenly throughout the year . During May 2018, the company produced 500 completed unit . Actual data for May 2018 are as follows :

Direct material purchased : 10000 pounds @ $\$ 0.92$ per pound Direct material used : 9500 pounds (all from May's purchases)
Total labor cost : \$12180 for 2100 hours ( $\mathbf{\$ 5 . 8} \mathbf{~ p e r ~ h o u r ) ~}$
Factory overhead incurred : \$11100 (6100 variable, 5000 fixed)
Required :

1. Calculate the standard cost per unit .
2. Prepare the summary of costs elements variances .
3. Calculate and analysis the variance of direct materials, direct labor and factory overhead by using two, three and four variance method.

Solution :

1. Standard Cost Per Unit :

| Costs Elements | Calculation |  | Cost Per Unit |
| :---: | :---: | :---: | :---: |
| Direct Material | 20 pounds $\times \$ 0.9$ | $=$ | $\$ 18$ per unit |
| Direct Labor | 4 hours $\times \$ 6$ | $=$ | $\$ 24$ per unit |
| Factory Overhead | 4 hours $\times(\$ 1.25+\$ 3.75)$ | $=$ | $\$ 20$ per unit |
| Total |  |  | $\$ 62$ per unit |

2. Summary of Costs Elements Variances :

| Costs Elements | Actual Cost | Standard Cost | The Variance |
| :---: | :---: | :---: | :---: |
| Direct Material | $\mathbf{8 7 4 0}$ | $(500 \times 20 \times 0.9)=\mathbf{9 0 0 0}$ | \$260 Fav. |
| Direct Labor | $\mathbf{1 2 1 8 0}$ | $(500 \times 4 \times 6)=\mathbf{1 2 0 0 0}$ | \$180 Unfav. |
| Factory Overhead | $\mathbf{1 1 1 0 0}$ | $(500 \times 20)=\mathbf{1 0 0 0 0}$ | \$1100 Unfav. |
| Total | $\mathbf{3 2 0 2 0}$ | $\mathbf{3 1 0 0 0}$ | \$1020 Unfav. |

3. Calculation and analyzing the variance of DM, DL and FOH :

The Variance of DM :

1. Price Variance : $=(0.92-0.9) \times 9500=\$ 190$ Unfav.
2. Quantity Variance : $=(9500-10000) \times 0.9=\frac{\$ 450 \mathrm{Fav} .}{\$ 260 \mathrm{Fav}}$

The Variance of DL:

1. Rate Variance: $=(5.8-6) \times 2100=\$ 420$ Fav.
2. Efficiency Variance : $=(2100-2000) \times 6=\frac{\$ 600 \text { Unfav. }}{\underline{\$ 180 \text { Unfav. }}}$

## The Variance of FOH :

Two Variance Method :

1. Controllable Variance $=11100-[(2400 \times 1.25)+$ $(3.75 \times 2000)]$
$=11100-10500=\$ 600$ Unfav.
2. Volume Variance $=10500-10000$
$=\$ 500$ Unfav.
$\$ 1100$ Unfav.
Or :
Volume Variance $=(2400-2000) \times 1.25=\$ 500$ Unfav.

## Three Variance Method (Traditional Approach) :

1. Spending Variance $=11100-[(2400 \times 1.25)+$ $(3.75 \times 2100)]$
$=11100-10875=\$ 225$ Unfav.
2. Idle Capacity Variance $=10875-(2100 \times 5)$
$=10875-10500$
= \$375 Unfav.
3. Efficiency Variance $=10500-10000$
$=\$ 500$ Unfav. 1100 Unfav.

Or :
Idle Capacity Variance $=(2400-2100) \times 1.25=\$ 375$ Unfav.

Efficiency Variance $=(2100-2000) \times 5=\$ 500$ Unfav.

## Four Variance Method (Traditional Approach):

1. Spending Variance $=11100-10875=\$ 225$ Unfav.
2. Idle Capacity Variance $=10875-10500=\$ 375$ Unfav.
3. Variable Efficiency $=(2100-2000) \times 3.75=\$ 375$ Unfav. Variance
4. Fixed Efficiency $=(2100-2000) \times 1.25=\underline{\$ 125 \text { Unfav. }}$ Variance
$\$ 1100$ Unfav.

Three variance method (Modern Approach) :

1. Spending $=11100-[(2400 \times 1.25)+(3.75 \times$

Variance 2100)]

$$
=11100-10875 \quad=\$ 225 \text { Unfav. }
$$

2. Efficiency $=10875-[(2400 \times 1.25)+(3.75 \times$

Variance 2000)]
$=10875-10500=\$ 375$ Unfav.
3. Volume $=10500-10000=\$ 500$ Unfav.

Variance
$=\$ 1100$ Unfav.

## Four variance method (Modern Approach) :

1. Variable FOH $=6100-(3.75 \times 2000)$

Variance

$$
=6100-7500 \quad=\$ 1400 \text { Fav. }
$$

a. Variable $=6100-(3.75 \times 2100)$

Spending Variance

$$
=6100-7875 \quad=\$ 1775 \text { Fav. }
$$

b. Variable $=7875-7500 \quad=$ \$375 Unfav.

Efficiency
Variance
\$1400 Fav.
2. Fixed FOH $=5000-(1.25 \times 2000)$

Variance

$$
=5000-2500 \quad=\$ 2500 \text { Unfav. }
$$

a. Fixed $=5000-(1.25 \times 2400)$

Spending Variance

$$
=5000-3000
$$

$=\$ 2000$ Unfav.
a. Fixed $=3000-2500$
$=\$ 500$ Unfav.
Volume Variance
$\$ 2500$ Unfav.
$\begin{array}{rlr}\text { Total Variance For } & =\text { Variable FOH }+\underset{\text { Fixed FOH }}{ } \\ \text { FOH } & \text { Variance } & \text { Variance } \\ & =\$ 1400 \text { Fav. }+\$ 2500 \text { Unfav. }\end{array}$

## Exercises :

## Exercise (1) :

In February 2018, Marshal Company's costs and quantities of paper consumed in manufacturing its executive planner and calendar were as follow :

| Actual quantity purchased and issued during August | $\mathbf{1 8 0 0 0}$ page |
| :--- | :--- |
| Actual unit purchase price | $\mathbf{\$ 0 . 4 4}$ pages |
| Standard quantity per unit | $\mathbf{3 4}$ per pages |
| Standard price per unit | $\mathbf{\$ 0 . 4 6}$ per pages |
| Actual hour worked during August | $\mathbf{1 1 6 0 0}$ hour |
| Actual labor rate per hour | $\mathbf{1 . 2 3}$ per hour |
| Standard hour per unit | $\mathbf{2 4}$ hour |
| Standard labor rate per hour | $\mathbf{1 . 2 1}$ per hour |
| Production | $\mathbf{5 0 0}$ unit |

Required :

1. Compute and analysis of the material variances .
2. Compute and analysis of the Labor variances

## Exercise (2) :

The Pony company uses three types of material for manufacturing its product. The standard product mix for making 12500 tube of liquid solder is :

Material (A): 1500 kilogram @ $\$ 0.060$............. $\$ 90$
Material (B) : 625 kilogram @ $\$ 0.400$............ $\$ 250$
Material (C) : 1000 kilogram @ $\$ 0.250$............. \$250
During April 2018, 77500 tube to solder were product from input of :
Material (A): 8750 kilogram @ $\mathbf{\$ 0 . 0 5 6}$............. \$490
Material (B) : 3750 kilogram @ $\$ 0.380$............. \$1425
Material (C) : 6250 kilogram @ $\$ 0.280$............. \$1750
Required :
Compute the material price, mix and yield variances, including an analysis the mix and yield variances for each material .

## Exercise (3) :

The following data for June 2018 production of Spans company :

Production during month
Actual cost of material purchased and used
2400 handbags
\$9534.36

| Standard material allowed | 1/3 square yard per bag |
| :--- | :---: |
| Material quantity variance | $\$ 1188$ Unfav. |
| Actual hours worked | 5040 hours |
| Standard labor time per handbag | 4 hours |
| Labor rate variance | $\$ 1260$ Fav. |
| Standard labor rate per hour | $\$ 14$ |
| Standard price per yard of material | $\$ 16$ |

Required :

1. Calculation the standard quantity of material allowed for June production .
2. Calculation the standard direct labor hours allowed for June production .
3. Calculation the material price variance .
4. Calculation the labor efficiency variance .
5. Calculation the standard prime ( DM and DL ) cost to produce one bag.
6. Calculation the actual cost to produce one bag in November .

## Exercise (4) :

For 2018, Blankly company has set 120000 direct labor hours as the annual capacity measure for computing its predetermined variable overhead rate . At that level, budgeted variable overhead costs are $\$ 540000$. The company has decided to apply fixed overhead on the basis of machine hours . Total budgeted annual machine hours are 6600 \& annual budgeted fixed overhead is $\$ 237600$. Both machine hours and fixed overhead costs are expected to be incurred evenly each month . During August 2018, Blankly incurred 9800 direct labor hours and 500 machine hours . Variable and fixed overhead were, respectively, $\$ 42350$ and $\$ 21000$. The standard times allowed for March production were 9910 direct labor hours and 480 machine hours .

Required :
Determine the FOH variances for 2018 by using the following methods :

1. Two variance method.
2. Three variance method.
3. Four variance method

## Exercise (5) :

Pony Containers makes plastic water tanks for a variety of commercial uses . The standard per unit material, labor and overhead costs are as follows :

Direct material : 20 pounds @ \$1.8
Direct labor : 2 hours @ $\$ 12$ per hour
Variable overhead : 2 hours @ $\$ 7.5$ per hour
Fixed overhead : $\mathbf{2}$ hours @ $\$ 2.5$ per hour
The overhead application rates were developed using a normal capacity of 4800 direct labor hour . Production is assumed to occur evenly throughout the year . During April 2018, the company produced 1000 completed unit . Actual data for April 2018 are as follows :

Direct material purchased : 20000 pounds @ $\$ 1.84$ per pound Direct material used : 19000 pounds (all from April's purchases)
Total labor cost : \$24360 for 2100 hours ( $\$ 11.6$ per hour)
Factory overhead incurred : \$22200 (12200 variable, 10000 fixed)
Required :

1. Calculate the standard cost per unit .
2. Prepare the summary of costs elements variances .
3. Calculate and analysis the variance of direct materials, direct labor and factory overhead by using two, three and four variance method.

## Exercise (6) :

Sprewell company uses standard costing system . The standard costs per unit of material, labor, and overhead are as follows :

Direct material: 80 pounds @ \$4 ..... $\$ 160$

Direct labor: 1.25 hours @ \$32 per hour $\$ 20$
Variable overhead: 45 minutes of machine time @ \$100 per $\$ 25$
hour $\$ 20$
Fixed overhead: 45 minutes of machine time @ $\$ 80$ per hour
The overhead application rates were developed using a practical capacity of 5400 units per year. Production is assumed to occur evenly throughout the year . During November 2018, the company produced 500 tank . Actual data for November 2018 are as follows :

Direct material purchased : 46000 pounds @ $\$ 3.84$ per pound Direct material used : $\mathbf{4 4 0 0 0}$ pounds (all from November's purchases)
Total labor cost : \$22100 for $\mathbf{6 8 0}$ hours

Variable overhead incurred : \$27400 for $\mathbf{2 3 0}$ hours of machine time Fixed overhead incurred : \$21600 for $\mathbf{2 3 0}$ hours of machine time Required :

1. Calculate the standard cost per unit .
2. Prepare the summary of costs elements variances .
3. Calculate and analysis the variance of direct materials, direct labor and factory overhead by using two, three and four variance method .

## Chapter <br> 4 <br> Accounting Procedures for Standard Costing

## Example (1) :

Mississippi Marine products manufactures a neon lamp sign with the following standard costs :

Direct Material (2 kg. @ \$5 per kg.) \$10
Direct labor (2 hours @ \$7.5 per hour) \$15
Factory overhead :
Variable (2 hours@\$1.5 per hour) \$3
Fixed (2 hours @ \$1 per hour) \$2
The following data are given for December 2018 :

Price Variance
Quantity Variance
Total Variance of DM
Rate Variance
Efficiency Variance
Total Variance of DM
Controllable Variance
Volume Variance
Total Variance of DM
$\$ 1500$ Unfav.
$\$ 500$ Unfav.
$\$ 1000$ Unfav.
$\$ 500$ Fav.
$\$ 500$ Fav. $\$ 500$ Unfav.

During December 2018, 1800 completed unit, 1000 unit work in process (completed 20\%), 1500 sales unit, purchase material during month 15000 kg . @ $\$ 2.15$ per kg., used material during month 10250 kg. .
Required :
Record a journal entries by using partial and comprehensive methods .

## Solution :

Equivalent units $=1800+(1000 \times 20 \%)=2000$ unit

Purchase cost of materials $=15000 \times 2.15=\$ 32250$

| Costs <br> Elements | Standard Cost | The Variance | Actual Cost |
| :---: | :---: | :---: | :---: |
| DM | $\mathbf{( 2 0 0 0} \times \mathbf{1 0})=\$ \mathbf{2 0 0 0 0}$ | $\mathbf{\$ 2 0 0 0}$ Unfav. | $\mathbf{\$ 2 2 0 0 0}$ |
| DL | $\mathbf{( 2 0 0 0} \times \mathbf{1 5})=\mathbf{\$ 3 0 0 0 0}$ | $\mathbf{\$ 5 0 0}$ Unfav. | $\mathbf{\$ 3 0 5 0 0}$ |
| FOH | $\mathbf{( 2 0 0 0} \times \mathbf{5})=\$ 10000$ | Zero | $\mathbf{\$ 1 0 0 0 0}$ |

## First: Partial Method :

## 1. Direct Materials Entries :

$\begin{array}{ccc}\text { Materials Inventory Control } & \$ 32250 & \\ \text { Accounts Payable } & \$ 32250\end{array}$
Work In Process Inventory Control
\$22000
Materials Inventory Control
\$22000
2. Direct Labor Entries:
Labor Control
\$30500
Accrual Labor
\$30500
$\begin{array}{ccc}\text { Work In Process Inventory Control } & \$ 30500 & \\ \text { Labor Control (Actual) } & \$ 30500\end{array}$
3. Factory Overhead Entries:

Actual Factory Overhead \$10000
Various Accounts
$\$ 10000$

Work In Process Inventory Control \$10000
Actual Factory Overhead
\$10000
4. Completed the Production Units Entry [ $1800 \times(10+15+5)]:$
$\begin{aligned} & \text { Finished Goods Inventory Control } \\ & \text { Work In Process Inventory Control }\end{aligned} \$ 54000$
5. Standard Cost of Sales Units Entry:
$[1500 \times(10+15+5)]=\$ 45000$
Cost of Goods Sold $\$ 45000$
Finished Goods Inventory Control \$45000
6. Recording the Variances at Ending the Period :
Price Variance (Unfav.) ..... $\$ 1500$
Quantity Variance (Unfav.) ..... \$500
Rate Variance (Unfav.) ..... \$1000
Volume Variance (Unfav.) ..... $\$ 500$
Work In Process Inventory Control ..... \$3500
Work In Process Inventory Control ..... \$1000
Efficiency Variance (Fav.) ..... \$500
Controllable Variance (Fav.) ..... \$500

| Work In Process Inventory Control |  |  |  |
| :--- | :---: | :--- | :---: |
| Beginning Balance | Zero | Finished Goods (Standard) | $\$ 54000$ |
| Direct Materials (Actual) | $\$ 22000$ | Variances (Unfav.) | $\$ 3500$ |
| Direct Labor (Actual) | $\$ 30500$ |  |  |
| FOH (Actual) | $\$ 10000$ |  | $\$ 6000$ |
| Variances (Fav.) | $\$ 1000$ | Ending Balance |  |
|  |  |  | $\$ 63500$ |

Two: Comprehensive Method:

1. Direct Materials Entries :
Materials Inventory Control ..... \$32250
Accounts Payable$\$ 32250$
Work In Process Inventory Control ..... \$20000
Price Variance (Unfav.) ..... \$1500
Quantity Variance (Unfav.) ..... $\$ 500$Materials Inventory Control$\$ 22000$
2. Direct Labor Entries :
Labor Control ..... $\$ 30500$
Accrual Labor ..... $\$ 30500$

| Work In Process Inventory Control | \$30000 |  |
| :---: | :---: | :---: |
| Rate Variance (Unfav.) | \$1000 |  |
| Labor Control |  | \$30500 |
| Efficiency Variance (Fav.) |  | \$500 |
| 3. Factory Overhead Entries: |  |  |
| Actual Factory Overhead | \$10000 |  |
| Various Accounts |  | \$10000 |
| Work In Process Inventory Control | \$10000 |  |
| Applied Factory Overhead |  | \$10000 |
| Applied Factory Overhead | \$10000 |  |
| Volume Variance (Unfav.) | \$500 |  |
| Actual Factory Overhead |  | \$10000 |
| Controllable Variance (Fav.) |  | \$500 |
| 4. Completed the Production Units Entry: |  |  |
| Finished Goods Inventory Control | \$54000 |  |
| Work In Process Inventory Co | ntrol | \$54000 |
| 5. Standard Cost of Sales Units Entry : |  |  |
| Cost of Goods Sold | \$45000 |  |
| Finished Goods Inventory Con |  | \$45000 |
| Work In Process Inventory Control |  |  |
| Beginning Balance Zero | Finished Goods (Standard) | \$54000 |
| Direct Materials (Standard) \$20000 |  |  |
| Direct Labor (Standard) \$30000 |  |  |
| FOH (Standard) \$ \$10000 | Ending Balance | \$6000 |
| \$60000 |  | \$60000 |

| Standard Cost of DM | = | $200 \times 10$ | = | \$2000 |
| :---: | :---: | :---: | :---: | :---: |
| Standard Cost of DL | = | $200 \times 15$ | $=$ | \$3000 |
| Standard Cost of FOH | = | $200 \times 5$ | = | \$1000 |
|  |  |  |  | $\underline{\$ 6000}$ |

Example (2) :By using the data in example (1).
Required :
Treatment the variances by using the following method

1. Closed the variances in profits and losses .
2. Closed the variances in cost of goods sold .
3. Distribution the variances on the units (sold units, ending finishedgoods and ending WIP).
Solution :
4. Closed the Variances in Profits and Losses :
Profits and Losses ..... $\$ 3500$
Price Variances (Unfav.) ..... \$1500
Quantity Variances (Unfav.) ..... $\$ 500$
Rate Variances (Unfav.) ..... $\$ 1000$
Volume Variances (Unfav.) ..... \$500
Efficiency Variances (Fav.) ..... $\$ 500$
Controllable Variances (Fav.) ..... $\$ 500$
Profits and Losses ..... $\$ 1000$
5. Closed the Variances in Cost of Goods Sold :
Cost of Goods Sold ..... $\$ 3500$
Price Variances (Unfav.) ..... \$1500
Quantity Variances (Unfav.) ..... $\$ 500$
Rate Variances (Unfav.) ..... $\$ 1000$
Volume Variances (Unfav.) ..... $\$ 500$
Efficiency Variances (Fav.) ..... $\$ 500$
Controllable Variances (Fav.) ..... $\$ 500$
Cost of Goods Sold ..... $\$ 1000$
6. Distribution the Variances on the Units (Sold Units, Ending Finished Goods and Ending WIP) :
Equivalent Unit $=1800+(1000 \times 20 \%)$

$$
=1800+200
$$

$$
=2000 \text { Unit }
$$

| Sold Units | 1500 Unit |
| :---: | :---: |
| Ending Finished Goods | 300 Unit |
| Ending WIP | 200 Unit |
|  | $\underline{\underline{2000} \text { Unit }}$ |
| Net of Variances | $=$ Variances (Fav.) + Variances (Unfav.) |
|  | = \$1000 Fav. + \$3500 Unfav. |
|  | \$2500 Unfav. |

| Share of Sold Units |
| :--- |
| From Variances Net |$=\$ 2500 \times \frac{1500 \text { Unit }}{2000 \text { Unit }} \quad \$ 1875$ Unfav.

300 Unit

| Share of Ending Finished |
| :--- |
| Goods from Variances Net |$=\$ 2500 \times \underset{2000 \text { Unit }}{ }=\quad$ \$375 Unfav.

| Share of Ending WIP |
| :---: |
| from Variances Net |$=\$ 2500 \times \frac{200 \text { Unit }}{2000 \text { Unit }}=\underline{\$ 250 \text { Unfav. }}$

\$2500 Unfav.
Cost of Goods Sold \$1875
Finished Goods Inventory Control \$375
Work In Process Inventory Control \$250
Efficiency Variances (Fav.) \$500
Controllable Variances (Fav.) \$500
Price Variances (Unfav.) \$1500
Quantity Variances (Unfav.) \$500
Rate Variances (Unfav.) \$1000
Volume Variances (Unfav.) \$500

## Exercises :

## Exercise (1) :

Doorknob Design company uses standard costing system . At the beginning of 2018, the company budgeted annual production of 800,000 doorknobs and adopted the following standards for each doorknob :
Direct materials (brass) : ( 0.3 lb. @ \$20/lb.) ..... \$6
Direct manufacturing labor : (1.2 hours @ \$40/hour) ..... \$48
Manufacturing overhead :
Variable : (\$12/lb. $\times 0.3 \mathrm{lb}$. ..... $\$ 3.6$
Fixed : (\$30/lb. $\times 0.3 \mathrm{lb}$.) ..... \$9
Standard cost per doorknob ..... \$66.6
Actual results for April 2018 were as follows :
Production 70000 doorknobsDirect materials purchasedDirect materials usedDirect manufacturing laborVariable manufacturing overhead12,000 lb. at \$22/lb.
Fixed manufacturing overhead ..... $\$ 304000$10500 lb .38500 hours for $\$ 1617000$$\$ 128300$

Required :

1. Calculate and analysis the variance of direct materials, direct labor and factory overhead by using two, Three and four variance method.
2. Record a journal entries by using partial and comprehensive methods.

## Exercise (2) :

By using the data in exercise (1) .

## Required :

Treatment the variances by using the following method: 1. Closed the variances in P\&L, 2. Closed the variances in COGS, and 3. Distribution the variances on the units .

## Exercise (3) :

Bell company allocated to products on the basis of standard direct labor hours (DLH) . At the beginning of 2018, the company adopted the following standards for its manufacturing costs : adopted the following standards for each doorknob :
Direct materials : ( $\mathbf{3} \mathbf{~ l b}$. at $\$ 4$ per lb.) ..... \$12
Direct manufacturing labor : ( 5 hrs . at $\mathbf{\$ 3 0}$ per $\mathbf{~ h r}$.) ..... \$150
Manufacturing overhead :
Variable : (\$8 per DLH) ..... $\$ 40$
Fixed : (\$10 per DLH) ..... $\$ 50$
Standard manufacturing cost per output unit ..... \$252

The denominator level for total manufacturing overhead per month in 2018 is 80000 direct labor hours . Bell's flexible budget for January 2018 was based on this denominator level. The records for January indicated the following :

Direct materials purchased
Direct materials used
Direct manufacturing labor
Variable manufacturing overhead
Fixed manufacturing overhead
Actual production

50000 lb . at $\$ 4.4$ per lb.
46200 lb.
80400 hrs . at $\$ 28.6$ per hr.
$\$ 800000$
$\$ 400000$
15600 output units

Required :

1. Calculate and analysis the variance of direct materials, direct labor and factory overhead by using two, Three and four variance method .
2. Record a journal entries by using partial and comprehensive methods.

## Exercise (4) :

By using the data in exercise (3).
Required :
Treatment the variances by using the following method: 1. Closed the variances in P\&L, 2. Closed the variances in COGS, and 3. Distribution the variances on the units .

## Chapter <br> Gross Profit Analysis

## 5

## Example (1) :

Morocco Co. presents the following data for one inventory items :

| Data | Actual | Budget |
| :--- | :--- | :--- |
| Sales Volume | $\mathbf{9 0 0 0}$ unit | $\mathbf{1 0 0 0 0}$ unit |
| Sales Revenues | $\mathbf{\$ 1 0 8 0 0}$ | $\mathbf{\$ 1 0 0 0 0}$ |
| Cost of Goods Sold | $\mathbf{\$ 6 7 5 0 )}$ | $\mathbf{( \$ 6 0 0 0 )}$ |
| Gross Profit | $\mathbf{\$ 4 0 5 0}$ | $\mathbf{\$ 4 0 0 0}$ |

Required :
Compute the following variances concerned with Gross Profit
Analysis :

1. Sales Revenues Variance :
a. Sales Price Variance .
b. Sales Volume Variance .
2. Cost of Goods Sold Variance :
a. Cost Price Variance .
b. Cost Volume Variance .

## Solution :

Actual Sales Price Per Unit $=\mathbf{\$ 1 0 8 0 0} \div \mathbf{9 0 0 0}$ unit $=\mathbf{1 . 2}$ Dollar/Unit
Budget Sales Price Per Unit $=\mathbf{\$ 1 0 0 0 0} \div \mathbf{1 0 0 0 0}$ unit $=\mathbf{1}$ Dollar/Unit
Actual Cost Price Per Unit $=\mathbf{\$ 6 7 5 0} \div \mathbf{9 0 0 0}$ unit $=\mathbf{0 . 7 5}$ Dollar/Unit
Budget Cost Price Per Unit $=\mathbf{\$ 6 0 0 0} \div \mathbf{1 0 0 0 0}$ unit $=\mathbf{0 . 6}$ Dollar/Unit
Gross Profit Analysis $=4050-4000=\$ 50$ Fav.

Analysis to :

1. Sales Revenues $=10800-10000=\$ 800$ Fav.

Variance
2. Cost of Goods $=6750-6000=\$ 750$ Unfav.

Sold Variance
$\$ 750$ Unfav.

1. Sales Revenues Variance :
a. Sales Price $=(1.2-1) \times 9000=\$ 1800$ Fav. Variance
b. Sales Volume $=(9000-10000) \times 1=\underline{\$ 1000 \text { Unfav. }}$ Variance $\$ 800$ Fav.
2. Cost of Goods Sold Variance :
a. Cost Price $=(0.75-0.6) \times 9000=\$ 1350$ Unfav.

Variance
b. Cost Volume $=(9000-10000) \times 0.6=\underline{\$ 600 \text { Fav }}$.

Variance
$\$ 750$ Unfav.

## Example (2) :

Dallas Co. presents the following data for one inventory items :

| Data | Actual | Budget |
| :--- | :--- | :--- |
| Total unit | $\mathbf{2 2 0 0 0}$ unit | $\mathbf{2 0 0 0 0}$ unit |
| Sales Price Per Unit | $\mathbf{\$ 1 2 0 0}$ | $\mathbf{\$ 1 0 0 0}$ |
| Cost Per Unit | $\mathbf{8 8 0 0}$ | $\mathbf{\$ 6 0 0}$ |

Required :
Compute the following variances concerned with Gross Profit
Analysis :

1. Sales Revenues Variance :
a. Sales Price Variance .
b. Sales Volume Variance .
2. Cost of Goods Sold Variance :
a. Cost Price Variance .
b. Cost Volume Variance .

## Solution :

Actual Sales Revenues $=\mathbf{2 2 0 0 0} \times \mathbf{1 2 0 0}=\mathbf{\$ 2 6 4 0 0 0 0 0}$
Budget Sales Revenues $=\mathbf{2 0 0 0 0} \times 1000=\$ 20000000$
Actual Cost of Goods Sold $=\mathbf{2 2 0 0 0} \times \mathbf{8 0 0}=\mathbf{\$ 1 7 6 0 0 0 0 0}$

Budget Cost of Goods Sold $=\mathbf{2 0 0 0 0} \times \mathbf{6 0 0}=\mathbf{\$ 1 2 0 0 0 0 0 0}$
Actual Gross Profit $=26400000-17600000=\$ 8800000$
Budget Gross Profit $=\mathbf{2 0 0 0 0 0 0 0} \mathbf{- 1 2 0 0 0 0 0 0}=\mathbf{\$ 8 0 0 0 0 0 0}$

Gross Profit Analysis $=8800000-8000000=\$ 800000$ Fav.

Analysis to :

1. Sales Revenues $=26400000-20000000=6400000$ Fav.

Variance
2. Cost of Goods $=17600000-12000000=\$ 5600000$ Unfav. Sold Variance
$\$ 40000$ Fav.

1. Sales Revenues Variance :
a. Sales Price $=(1200-1000) \times=\$ 4400000$ Fav. Variance 22000
b. Sales Volume $=(22000-20000)=\underline{\$ 2000000 ~ F a v .}$ Variance $\times 1000$
$\$ 6400000$ Fav.
2. Cost of Goods Sold Variance :
a. Cost Price $=(800-600) \times \quad=\$ 4400000$ Unfav.

Variance 22000
b. Cost Volume $=(22000-20000) \times=\underline{\$ 1200000 \text { Unfav. }}$ Variance 600
$\$ 5600000$ Unfav.

## Example (3) :

A cost analysis has prepared a monthly gross profit analysis for Marten company, comparing to actual and budget for three products X , Y and Z, June actual and budget data follows :

| Actual Data |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Products | Units | Sales Revenues |  | Cost of Goods Sold |  | Gross |
|  |  | Sales Price | Amount | Cost Per Unit | Amount | Profit |
| $\mathbf{X}$ | $\mathbf{1 0 0 0 0}$ | $\mathbf{6 . 6}$ | $\mathbf{6 6 0 0 0}$ | $\mathbf{4}$ | $\mathbf{4 0 0 0 0}$ | $\mathbf{2 6 0 0 0}$ |
| Y | $\mathbf{4 0 0 0}$ | $\mathbf{3 . 5}$ | $\mathbf{1 4 0 0 0}$ | $\mathbf{3 . 5}$ | $\mathbf{1 4 0 0 0}$ | $\mathbf{0}$ |
| Z | $\mathbf{2 0 0 0 0}$ | 3 | $\mathbf{6 0 0 0 0}$ | $\mathbf{2 . 8}$ | 56000 | $\mathbf{4 0 0 0}$ |
|  |  |  | $\mathbf{1 4 0 0 0 0}$ |  | $\mathbf{1 1 0 0 0 0}$ | $\mathbf{3 0 0 0 0}$ |

| Budget Data |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Products | Units | Sales Revenues |  | Cost of Goods Sold |  | Gross |
|  |  | Sales Price | Amount | Cost Per Unit | Amount | Profit |
| X | $\mathbf{8 0 0 0}$ | $\mathbf{5}$ | $\mathbf{4 0 0 0 0}$ | $\mathbf{4}$ | $\mathbf{3 2 0 0 0}$ | $\mathbf{8 0 0 0}$ |
| Y | $\mathbf{7 0 0 0}$ | $\mathbf{4}$ | $\mathbf{2 8 0 0 0}$ | $\mathbf{3 . 5}$ | $\mathbf{2 4 5 0 0}$ | $\mathbf{3 5 0 0}$ |
| Z | $\mathbf{2 0 0 0 0}$ | $\mathbf{2 . 6}$ | $\mathbf{5 2 0 0 0}$ | $\mathbf{2 . 1 7 5}$ | $\mathbf{4 3 5 0 0}$ | $\mathbf{8 5 0 0}$ |
|  |  |  | $\mathbf{1 2 0 0 0 0}$ |  | $\mathbf{1 0 0 0 0 0}$ | $\mathbf{2 0 0 0 0}$ |

Required:
Compute the price and volume variances for sales and cost, and the sales mix and final sales volume variances .

## Solution :

Gross Profit Analysis $=30000-20000=\$ 10000$ Fav.

Analysis to :

1. Sales Revenues $=140000-120000=\$ 20000$ Fav.

Variance
2. Cost of Goods $=110000-100000=\$ 10000$ Unfav.

Sold Variance
$\$ 10000$ Fav.

## 1. Sales Revenues Variances:

a. Sales Price Variance $=(\mathrm{AP}-\mathrm{BP}) \times \mathrm{ASV}$

Product $X=(6.6-5) \times 10000=\$ 16000$ Fav.
Product $Y=(3.5-4) \times 4000=\$ 2000$ Unfav.
Product $Z=(3-2.6) \times 20000=\$ 8000$ Fav. $\$ 22000$ Fav.

$$
\begin{aligned}
& \text { b. Sales Volume Variance }=(\mathrm{ASV}-\mathrm{BSV}) \times \mathrm{BP} \\
& \text { Product } \mathrm{X}=(10000-8000) \times 5=\$ 10000 \text { Fav. } \\
& \text { Product } Y=(4000-7000) \times 4=\$ 12000 \text { Unfav. } \\
& \text { Product } Z=(20000-20000) \times 2.6=\underline{\text { Zero }} \\
& \text { \$2000 Unfav. } \\
& \text { Sales Revenues }=\text { Sales Price Variance }+ \text { Sales Volume } \\
& \text { Variances } \\
& =\$ 22000 \text { Fav. }+\$ 2000 \text { Unfav. } \\
& =\$ 20000 \text { Fav. }
\end{aligned}
$$

2. Cost of Goods Sold Variances :
a. Cost Price Variance $=(\mathrm{ACPU}-\mathrm{BCPU}) \times \mathrm{ACV}$

Product $\mathrm{X}=(4-4) \times 10000=$ Zero
Product $Y=(3.5-3.5) \times 4000=$ Zero
Product $Z=(2.8-2.175) \times 20000=\$ 12500$ Unfav. $\$ 12500$ Unfav.
b. Cost Volume Variance $=(\mathrm{ACV}-\mathrm{BCV}) \times \mathrm{BCPU}$

Product $\mathrm{X}=(10000-8000) \times 4=\$ 8000$ Unfav.
Product $Y=(4000-7000) \times 3.5=\$ 10500$ Fav.
Product $Z=(20000-20000) \times 2.175=\underline{\text { Zero }}$ $\$ 2500$ Fav.

Cost of Goods Sold $=$ Cost Price Variance + Cost Volume Variance Variances

$$
\begin{aligned}
& =\$ 12500 \text { Unfav. }+\$ 2500 \text { Fav. } \\
& =\$ 10000 \text { Unfav. }
\end{aligned}
$$

Net Volume $=$ Sales Volume Variance + Cost Volume Variance Variance
$=\$ 2000$ Unfav. $+\$ 2500$ Fav.
$=\$ 500$ Unfav.

Analysis to :

1. Sales Mix Variance :
(Actual Sales Volume $\times$ Their Budget Price)
$[(10000 \times 5)+(4000 \times 4)+(20000 \times 2.6)]=\$ 118000$

- (Actual Sales Volume $\times$ Their Budget Cost Per Unit)
$-[(10000 \times 4)+(4000 \times 3.5)+(20000 \times 2.175)]=(\$ 97500)$
- (Actual Sales Volume $\times$ Budget Gross Profit Average)
$-(10000+4000+20000) \times[20000 \div(8000+7000+=\underline{(\$ 19418})$ 20000)]

2. Final Sales Volume Variance :
(Actual Sales Volume $\times$ Budget Gross Profit Average)
$(10000+4000+20000) \times[20000 \div(8000+7000+20000)]=\$ 19418$

- Budget Gross Profit
$=(\$ 20000)$
(\$572) Unfav.

$$
\begin{aligned}
\begin{array}{l}
\text { Net Volume } \\
\text { Variance }
\end{array} & =\text { Sales Mix Variance }+ \text { Final Sales Volume } \\
& \text { Variance } \\
& =\$ 1072 \text { Fav. }+(\$ 572) \text { Unfav. } \\
& =\$ 500 \text { Unfav. }
\end{aligned}
$$

## Exercises :

## Exercise (1) :

Darleen company presents the following data for one inventory items :

| Data | Actual | Budget |
| :--- | :--- | :--- |
| Sales Volume | $\mathbf{1 8 0 0 0}$ unit | $\mathbf{2 0 0 0 0}$ unit |
| Sales Revenues | $\mathbf{\$ 2 1 6 0 0}$ | $\mathbf{\$ 2 0 0 0 0}$ |
| Cost of Goods Sold | $\mathbf{\$ 1 3 5 0 0}$ | $\mathbf{\$ 1 2 0 0 0}$ |
| Gross Profit | $\mathbf{\$ 8 1 0 0}$ | $\mathbf{\$ 8 0 0 0}$ |

Required :
Compute the following variances concerned with Gross Profit
Analysis :

1. Sales Revenues Variance :
a. Sales Price Variance .
b. Sales Volume Variance .
2. Cost of Goods Sold Variance :
a. Cost Price Variance .
b. Cost Volume Variance .

## Exercise (2) :

Daft company presents the following data for one inventory items :

| Data | Actual | Budget |
| :--- | :--- | :--- |
| Total unit | $\mathbf{4 4 0 0 0}$ unit | $\mathbf{4 0 0 0 0}$ unit |
| Sales Price Per Unit | $\mathbf{\$ 2 4 0 0}$ | $\$ 2000$ |
| Cost Per Unit | $\mathbf{\$ 1 6 0 0}$ | $\mathbf{\$ 1 2 0 0}$ |
| Contribution Margin Per Unit | $\mathbf{\$ 8 0 0}$ | $\$ 800$ |

Required :
Compute the following variances concerned with Gross Profit
Analysis :

1. Sales Revenues Variance :
a. Sales Price Variance .
b. Sales Volume Variance .
2. Cost of Goods Sold Variance :
a. Cost Price Variance .
b. Cost Volume Variance .

## Exercise (3) :

Mitten company manufacturing two products Alfa and Beta . Cost accountant prepared a monthly gross profit analysis, therefore, he comparing the actual and budget for two products during June 2018 as following :

| Actual Data |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Products | Units | Sales Revenues |  | Cost of Goods Sold |  | Gross |  |
|  |  | Sales Price | Amount | Cost Per Unit | Amount | Profit |  |
| Alfa | $\mathbf{2 0 0 0 0}$ | $\mathbf{7 . 8}$ | $\mathbf{1 5 6 0 0 0}$ | 5.6 | $\mathbf{1 1 2 0 0 0}$ | $\mathbf{4 4 0 0 0}$ |  |
| Beta | $\mathbf{8 0 0 0}$ | $\mathbf{4 . 5}$ | $\mathbf{3 6 0 0 0}$ | $\mathbf{3 . 7}$ | $\mathbf{2 9 6 0 0}$ | $\mathbf{6 4 0 0}$ |  |
|  |  |  | $\mathbf{1 9 2 0 0 0}$ |  | $\mathbf{1 4 1 6 0 0}$ | $\mathbf{5 0 4 0 0}$ |  |

| Budget Data |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Products | Units | Sales Revenues |  | Cost of Goods Sold |  | Gross |  |
|  |  | Sales Price | Amount | Cost Per Unit | Amount | Profit |  |
| Alfa | $\mathbf{1 6 0 0 0}$ | $\mathbf{8}$ | $\mathbf{1 2 8 0 0 0}$ | $\mathbf{4}$ | $\mathbf{6 4 0 0 0}$ | $\mathbf{6 4 0 0 0}$ |  |
| Beta | $\mathbf{1 0 0 0 0}$ | $\mathbf{4}$ | $\mathbf{4 0 0 0 0}$ | $\mathbf{3 . 8}$ | $\mathbf{3 8 0 0 0}$ | $\mathbf{2 0 0 0}$ |  |
|  |  |  | $\mathbf{1 6 8 0 0 0}$ |  | $\mathbf{1 0 2 0 0 0}$ | $\mathbf{6 6 0 0 0}$ |  |

Required :
Compute the price and volume variances for sales and cost, and the sales mix and final sales volume variances .

# Other Subjects <br> Standard Costs System in Process Costing 

## Example (1) :

Griddle corporation uses the standard costs system in process costing . The following data for first process :

1. Standard cost per unit of their product :

Direct Materials : 4 litters $\$ 200$
Direct Labor : 3 hours $\$ 75$
Factory Overhead : applied as bases DLH \$150
Standard Cost Per Unit \$425
2. Fixed factory overhead budget was $\$ 300000$, and the normal capacity was 5000 unit per month .
3. The beginning work in process 1000 unit completed $20 \%$ of conversion costs, and the ending work in process 2000 unit completed $40 \%$ of conversion costs .
4. 4500 unit were started through month, and 3000 unit were completed.
5. The inspection occurred when production was $50 \%$, and the normal spoilage was $5 \%$ of good units .
6. 16500 litters of materials were issued to production at $\$ 60$ per litter.
7. The direct labor is $\$ 317200$ for 12200 hours .
8. Actual factory overhead was $\$ 600000$.
9. Materials added to production at four point as follows : ( $40 \%$ added in beginning of process, $30 \%$ added in level $30 \%$ of process, $20 \%$ added in level $60 \%$ of process, The remain in ending of process).
10.The corporation uses FIFO method for work in process .

Required :

1. Prepare process cost report .
2. Prepare cost summarization report .
3. Prepare performance report and analysis the variances by using two variances method.
4. Prepare a journals entries by using partial and comprehensive methods.

## Solution :

1. Process Cost Report :

| Data | Physical |  |  |
| :--- | :---: | :---: | :---: |
|  | Flow | Equivalent Unit |  |
|  | Materials | Conversion |  |
| Beginning WIP | $\mathbf{1 0 0 0}$ |  |  |
| Started Units | $\underline{4500}$ |  |  |
| Inputs | $\underline{\underline{5500}}$ |  |  |
|  |  |  |  |
| Units of Completed : |  |  |  |
| $\quad$ From Beginning WIP (20\%) | 1000 | 600 | $\mathbf{8 0 0}$ |
| $\quad$ From Started Units | 2000 | 2000 | 2000 |
| Ending WIP (40\%) | $\mathbf{2 0 0 0}$ | 1400 | $\mathbf{8 0 0}$ |
| Normal Spoilage (50\%) | $\mathbf{1 5 0}$ | 105 | 75 |
| Abnormal Spoilage (50\%) | $\underline{\mathbf{3 5 0}}$ | $\underline{\mathbf{2 4 5}}$ | $\underline{\mathbf{1 7 5}}$ |
| Output | $\underline{\underline{5500}}$ | $\underline{\underline{\mathbf{4 3 5 0}}}$ | $\underline{\underline{\mathbf{3 8 5 0}}}$ |

## 2. Cost Summarization Report :

A. Cost of Completed Unit :
$\mathbf{( 3 0 0 0} \times \mathbf{4 2 5}) \quad=\mathbf{\$ 1 2 7 5 0 0 0}$

+ Share of Normal Spoilage (Current Period)
$[(105 \times 200)+(75 \times 225)] \quad=\underline{\$ 37875}$ $\$ 1312875$
B. Cost of Ending WIP :
$[(1400 \times 200)+(800 \times 225)]=\$ 460000$
C. Cost of Abnormal Spoilage :
$[(245 \times 200)+(175 \times 225)]$
$=\underline{\$ 88375}$

Total Cost Account For $\underline{\$ 1861250}$

Realization:
A. Cost of Beginning WIP :
$[(400 \times 200)+(200 \times 225)]=\$ 125000$
B. Cost of Current Period (Standard) :
$[(4350 \times 200)+(3850 \times 225)]=\underline{\$ 1736250}$
Total Cost Account For $\underline{\underline{\mathbf{\$ 1 8 6 1 2 5 0}}}$
3. Performance Report :

| Data | Actual Cost | Standard Cost | Variances |
| :---: | :---: | :---: | :---: |
| Direct Materials | $\begin{gathered} (16500 \times 60) \\ \$ 990000 \end{gathered}$ | $\begin{gathered} (4350 \times 4 \times 50) \\ \$ 870000 \end{gathered}$ | \$120000 Unfav. |
| Direct Labor | $\begin{gathered} (12200 \times 26) \\ \$ 317200 \end{gathered}$ | $\begin{gathered} (3850 \times 3 \times 25) \\ \$ 288750 \end{gathered}$ | \$28450 Unfav. |
| Factory Overhead | \$600000 | $\begin{gathered} (3850 \times 3 \times 50) \\ \$ 577500 \end{gathered}$ | \$22500 Unfav. |
| Total | \$1907200 | \$1736250 | \$170950 Unfav. |

## Notes :

4350 Equivalent Unit of Direct Materials
3850 Equivalent Unit of Conversion Costs
5000 Unit $\times$ Hour $=15000$ Normal Capacity Hour
$\$ 300000 \div 15000$ Hour $=\$ 20$ Fixed Allocated Rate
$150 \div 3=\$ 50$ Total Allocated Rate
$50-20=\$ 30$ Variable Allocated Rate

## Analyzing of the variances :

## The Variance of DM :

$\begin{array}{lll}\text { 1. Price Variance: } & =(60-50) \times 16500 & =\$ 165000 \text { Unfav. } \\ \text { 2. } \text { Quantity Variance : }=(16500-17400) \times 50 & =\$ 45000 \text { Fav. } \\ & & \$ 120000 \text { Unfav. }\end{array}$

The Variance of DL :

1. Rate Variance : $=(26-25) \times 12200=\$ 12200$ Unfav.
2. Efficiency Variance : $=(12200-11550) \times 25=\$ 16250$ Unfav.
$\$ 28450$ Unfav.

## The Variance of $\mathbf{F O H}$ :

Two Variance Method :

1. Controllable Variance $=600000-[300000+(30 \times 3850 \times 3)]$

$$
=600000-646500 \quad=\$ 46500 \text { Fav. }
$$

2. Volume Variance $=646500-577500=\$ 69000$ Unfav. $\$ 22500$ Unfav.

## 4. Journals Entries :

## A. Partial Method :

## 1. Direct Materials Entry :

$\begin{array}{ccc}\text { Work In Process Inventory Control } & \$ 990000 & \\ \text { Materials Inventory Control } & & \$ 990000\end{array}$

| 2. Direct Labor Entry : |  |  |
| :--- | :--- | :--- |
| Work In Process Inventory Control | $\$ 317200$ |  |
| $\quad$ Labor Control |  | $\$ 317200$ |

| 3. Factory Overhead Entry : |  |  |
| :--- | :--- | :--- |
| Work In Process Inventory Control | $\$ 600000$ |  |
| Actual Factory Overhead |  | $\$ 600000$ |

4. Completed the Production Units Entry :
Finished Goods Inventory Control ..... \$1312875
Work In Process Inventory Control ..... \$1312875
5. Abnormal Spoilage Entry :
Abnormal Spoilage (Profits and Losses) ..... \$88375
Work In Process Inventory Control ..... \$88375
6. Recording the Variances at Ending the Period :
Price Variances (Unfav.) ..... $\$ 165000$
Rate Variances (Unfav.) ..... \$12200
Efficiency Variances (Unfav.) ..... \$16250
Volume Variances (Unfav.) ..... \$69000
Work In Process Inventory Control ..... \$262450
Work In Process Inventory Control ..... $\$ 91500$
Quantity Variances (Fav.) ..... \$45000
Controllable Variances (Fav.) ..... \$46500

| Work In Process Inventory Control |  |  |  |
| :--- | ---: | :--- | ---: |
| Beginning Balance | $\$ 125000$ | Finished Goods (Standard) | $\$ 1312875$ |
| Direct Materials (Actual) | $\$ 990000$ | Abnormal Spoilage (Standard) | $\$ 88375$ |
| Direct Labor (Actual) | $\$ 317200$ | Variances (Unfav.) | $\$ 262450$ |
| FOH (Actual) | $\$ 600000$ |  |  |
| Variances (Fav.) | $\$ 91500$ | Ending Balance | $\$ 460000$ |
|  | $\$ 2123700$ |  | $\$ 2123700$ |

## B. Comprehensive Method :

## 1. Direct Materials Entry :

Work In Process Inventory Control \$870000
Price Variances (Unfav.) \$165000
Materials Inventory Control \$990000
Quantity Variances (Fav.) \$45000

## 2. Direct Labor Entry :

Work In Process Inventory Control \$288750
Rate Variances (Unfav.) \$12200
Efficiency Variances (Unfav.) \$16250
Labor Control \$317200

## 3. Factory Overhead Entry :

Actual Factory Overhead \$600000
Various Accounts \$600000
Work In Process Inventory Control \$577500
Applied Factory Overhead \$577500
Applied Factory Overhead \$577500
Volume Variances (Unfav.) \$69000
Actual Factory Overhead $\$ 600000$

Controllable Variances (Fav.) \$46500
4. Completed the Production Units Entry :

Finished Goods Inventory Control \$1312875
Work In Process Inventory Control \$1312875

## 5. Spoilage Entry :

| Abnormal Spoilage (Profits and Losses) | $\$ 88375$ |  |
| :---: | :---: | :---: |
| Work In Process Inventory Control |  | $\$ 88375$ |

| Work In Process Inventory Control |  |  |  |
| :--- | :--- | :--- | ---: |
| Beginning Balance | $\mathbf{\$ 1 2 5 0 0 0}$ | Finished Goods (Standard) | $\mathbf{\$ 1 3 1 2 8 7 5}$ |
| Direct Materials (Standard) | $\mathbf{\$ 8 7 0 0 0 0}$ | Abnormal Spoilage (Standard) | $\$ 88375$ |
| Direct Labor (Standard) | $\mathbf{\$ 2 8 8 7 5 0}$ |  |  |
| FOH (Standard) | $\mathbf{\$ 5 7 7 5 0 0}$ | Ending Balance | $\mathbf{\$ 4 6 0 0 0 0}$ |
|  | $\mathbf{\$ 1 8 9 9 1 2 5}$ |  | $\$ 1899125$ |

## Exercises :

## Exercise (1) :

Garnett company uses the standard costs system in process costing . The following data for first process :

1. Standard cost per unit of their product :

Direct Materials : (1 kg. per unit) \$50
Direct Labor : $\$ 60$
Factory Overhead : (\$15 of them variable) \$22.5
Standard Cost Per Unit $\$ 132.5$
2. The company applied FOH based on direct labor hours, the budget normal capacity for May 2018 was 15000 unit at 0.5 standard hour of direct labor per unit.
3. The beginning WIP 1000 unit completed $40 \%$ of conversion costs, and the ending WIP (?) unit completed $40 \%$ of conversion costs.
4. Unit started through month 12000 unit, and 11000 unit were completed and transferred out the process .
5. The inspection occurred in $2 \%$, and the normal spoilage was $10 \%$ of good units, and the company not submitted any abnormal spoilage .
6. 11500 kg . of direct materials were issued to production at $\$ 49$ per kg. .
7. Actual direct labor was 5500 hours at $\$ 130$ per hour .
8. Actual factory overhead was $\$ 250000$.
9. Direct materials added at beginning was $25 \%$ and the remain at $70 \%$ of production .
10.The company uses FIFO method for work in process .

Required :

1. Prepare process cost report .
2. Prepare cost summarization report .
3. Prepare performance report and analysis the variances by using two variances method.
4. Prepare a journals entries by using partial and comprehensive methods.

## Exercise (2) :

Ford company uses the standard costs system in process costing. The following data for first process :

1. Standard cost per unit of their product :

## Direct Materials : 4 ton $\$ 400$

Direct Labor : 3 hours \$150
Factory Overhead : applied as bases DLH $\underline{\mathbf{\$ 3 0 0}}$
Standard Cost Per Unit $\underline{\underline{\mathbf{8 5 0}}}$
2. Fixed factory overhead budget was $\$ 600000$, and the normal capacity was 5000 unit per month .
3. The beginning work in process 2000 unit completed $30 \%$ of conversion costs, and the ending work in process 4000 unit completed $80 \%$ of conversion costs .
4. 9000 unit were started through month, and 6000 unit were completed.
5. The inspection occurred when production was $75 \%$, and the normal spoilage was $4 \%$ of good units .
6. 38000 ton of materials were issued to production at $\$ 96$ per litter .
7. The direct labor is $\$ 1390800$ for 24400 hours .
8. The following addition data is available for month :

Actual FOH was $\$ 1200000$. Materials added to production at four point as follows : ( $25 \%$ added in beginning of process, $50 \%$ added in level $30 \%$ of process, $15 \%$ added in level $30 \%$ of process, The remain in ending of process) . The company uses FIFO method for work in process .
Required :

1. Prepare process cost report .
2. Prepare cost summarization report .
3. Prepare performance report and analysis the variances by using two variances method.
4. Prepare a journals entries by using partial and comprehensive methods.

## Exercise (3) :

Johnstown manufacturing company produces custom made, dyed sweat shirt for distribution on college campuses . The following standard have been established :

## Direct Materials :

## Cotton Cloth : 2 yards @ \$1 <br> \$2

Dyes: 1 pint @ 0.5 \$0.5
Direct Labor: 1/2 hours @ 6 per hour $\$ 3$
Factory Overhead : 1/2 hour@\$10 per hour \$5 Total Standard Cost Per Unit $\underline{\underline{\mathbf{\$ 1 0 . 5}}}$
The monthly production budget is based on normal plant operation of 1600 hour, with fixed factory overhead of $\$ 11200$. the following data concerned with transaction during January 2018 :

1. Work in process inventory at Jan.1, 1000 unit $1 / 4$ finished as to conversion .
2. 3000 unit completed and transferred to finished goods .
3. 3200 unit started this month .
4. Work in process inventory at Jan. 31, 800 unit $2 / 3$ finished as to conversion.
5. Normal spoilage $5 \%$ of good unit pass the inspection, inspection point at the middle of production .
6. Cotton cloth issued and used at the beginning 5600 yard at $\$ 1.1$
7. Dyes issued and used when production was $20 \%, 2700$ pints at $\$ 0.45$.
8. Direct labor payroll 1550 hour at $\$ 5.9$.
9. Actual factory overhead $\$ 16100$.
10.The company used FIFO method .

Required :

1. Prepare process cost report .
2. Prepare cost summarization report .
3. Prepare performance report and analysis the variances by using two variances method .
4. Prepare a journals entries by using partial and comprehensive methods.
